2011 MONITORING RESULTS

Introduction

This report contains 2011 data for the Tunnel and Reservoir Plan Des Plaines Tunnel System compiled from the monitoring of the 40 monitoring wells, QD-21 through QD-60, located along the Des Plaines Tunnel alignment. The monitoring wells are located along the 13A extension, south leg, middle leg, and north leg of the Des Plaines Tunnel System. These monitoring wells were sampled either three times per year or six times per year. Monitoring wells QD-21 through QD-26, QD-28 through QD-32, QD-35, QD-36, and QD-38 through QD-60 were sampled three times per year (Illinois Environmental Protection Agency [IEPA] memoranda July 9, 2004, and February 23, 2006). Monitoring wells QD-27, QD-33, QD-34, and QD-37 were sampled six times per year (IEPA memorandum July 9, 2004, and February 23, 2006).

Monitoring Data

Appendix AI contains a schematic showing the relative locations of the 40 monitoring wells along the Des Plaines Tunnel System.

Tables AII-1 and AII-2 in Appendix AII contain groundwater quality data for 2011 pertaining to the 40 monitoring wells QD-21 through QD-60 in the Des Plaines Tunnel System.

All of the monitoring wells in the Des Plaines Tunnel System were visited for the required number of samples. However, in some instances the monitoring well could not be sampled. Monitoring well QD-40 could not be sampled during 2011, because the pump was inoperable. A work order was issued in 2010 to fix the pump. The work order has not yet been completed due to a lack of parts to repair the pump. Monitoring well QD-34 could not be sampled on January 31, 2011, February 23, 2011, May 26, 2011, and July 15, 2011, because the pump was inoperable. Monitoring well QD-49 could not be sampled on February 17, 2011, because there was insufficient water in the monitoring well to collect a sample. Monitoring well QD-58 could not be sampled on October 13, 2011, because of a generator malfunction. A work order to fix the generator has been issued.

Summary of Data

Tables 1 through 8 contain summary statistics of the groundwater quality parameters for 2011 for all 40 monitoring wells QD-21 through QD-60 in the Des Plaines Tunnel System. These statistics are computed from the groundwater quality data collected from each monitoring well in 2011. The summary statistics include minimum, mean, maximum, standard deviation (Stdv), median, and coefficient of variation (COV) for eight groundwater quality parameters analyzed during 2011. These groundwater quality parameters are: chloride (Cl), conductivity (Cond.), hardness as calcium carbonate (Hard.), ammonia nitrogen ($\text{NH}_3\text{-N}$), pH, sulfate (SO_4), total dissolved solids (TDS), and total organic carbon (TOC). For a ninth parameter, fecal coliform (FC), the geometric

mean (Geo. Mean) has been calculated and presented in the tables, along with minimum, maximum, and median. The statistical analyses of the data were conducted using Microsoft[®] Excel functions.

TABLE 1: SUMMARY STATISTICS OF THE 2011 DATA FOR THE MONITORING WELLS IN THE DES PLAINES TUNNEL SYSTEM: QD-21 THROUGH QD-25

Parameter ¹	Monitoring Well Number					
	QD-21	QD-22	QD-23	QD-24	QD-25

¹The limit of quantification (LOQ) is 10 mg/L for Cl, 15 mg/L for SO₄, 0.10 mg/L for NH₃-N, 1.0 mg/L for TOC, and 60 mg/L for TDS. The detection limit for the FC analysis using the membrane filter method varies based on the actual sample analyzed.

²Unfiltered samples; all others were filtered through 0.45-μm membrane.

³Monitoring well could not be sampled due to reasons given in text.

BLOQ = Below LOQ.
