INTRODUCTION

This report contains 2011 data for the Tunnel and Reservoir Plan Calumet Tunnel System compiled from monitoring groundwater elevations in observation wells and monitoring groundwater quality in monitoring wells. The observation and monitoring wells are located along the Calumet Tunnel System. The tunnel between Crawford Avenue and the Calumet Water Reclamation Plant has four monitoring wells (QC-1, QC-2, QC-2.1, and QC-2.2) and 11 observation wells (OC-1 through OC-11). The tunnel between 140th Street and Indiana Avenue has 17 monitoring wells (QC-3 through QC-19). The tunnel on the Torrence Avenue leg has nine monitoring wells (QC-20 through QC-28). The tunnel along the Little Calumet leg has nine monitoring wells (QC-29 through QC-37). Monitoring well QC-3, located along the tunnel between 140th Street and Indiana Avenue, is no longer being sampled, because of construction being directed by the Village of South Holland. The Metropolitan Water Reclamation District of Greater Chicago has been given permission by the Illinois Environmental Protection Agency (IEPA) to abandon monitoring well QC-3 (IEPA memorandum April 22, 2008).

Monitoring wells QC-1, QC-2, and QC-29 through QC-37 are sampled six times per year (IEPA memorandum July 9, 2004). Monitoring wells QC-2.1, QC-2.2, QC-4 through QC-7 (QC-8.1 is a dry well), and QC-9 through QC-28 are sampled three times per year (IEPA memoranda July 9, 2004, and February 23, 2006). Groundwater elevation readings are taken at the monitoring wells at the same frequency. Groundwater elevations are measured in observation wells OC-1 through OC-11 once every two weeks.

MONITORING DATA

Appendix AI contains a location map of observation wells OC-1 through OC-11 located along the Calumet Tunnel System.

Table AII-1 in Appendix AII contains groundwater elevation data for 2011 for observation wells OC-1 through OC-11 shown in Appendix AI. Table AII-1 also contains the yearly minimum, mean, and maximum groundwater elevations of each observation well.

Appendix AIII contains a location map of monitoring wells QC-1, QC-2, QC-2.1, QC-2.2, QC-3 through QC-7, QC-8.1, and QC-9 through QC-37 located along the Calumet Tunnel System.

Tables AIV-1 and AIV-2 in Appendix AIV contain the 2011 groundwater quality monitoring data for monitoring wells QC-1, QC-2, QC-2.1, QC-2.2, QC-4 through QC-7, and QC-9 through QC-37 along the Calumet Tunnel System shown in Appendix AIII. Monitoring well QC-3 has been abandoned due to construction, and monitoring well QC-8.1 is a dry well.

All of the monitoring wells in the Calumet system were visited for the required number of samples. However, in some instances the samples could not be collected. Monitoring well QC-1 could not be monitored during 2011 because the pump was inoperable. A work order has been issued to repair the pump. Monitoring well QC-30 could not be sampled on June 23, 2011, because construction blocked access to the well. Monitoring wells QC-32 through QC-34 and QC-37 could not be sampled during 2011, because there was insufficient water in these wells to collect a sample. Monitoring well QC-35 could not be sampled on April 14, 2011, June 23, 2011, August 26, 2011, and October 28, 2011, because there was insufficient water in the well to collect a sample. Monitoring well QC-36 could not be sampled on April 14, 2011, June 23, 2011, August 26, 2011, October 28, 2011, and December 2, 2011, because there was insufficient water in the well to collect a sample.

SUMMARY OF DATA

Observation Well Groundwater Elevation Data

In Figure 1, the 2011 groundwater elevation data for the observation wells (OC-1 through OC-11) of the Calumet Tunnel System have been plotted. In this figure, yearly minimum, mean, and maximum groundwater elevations of all 11 observation wells are plotted to show fluctuations in the groundwater elevations during 2011. Table AII-1 in Appendix AII contains the entire groundwater elevation data for 2011 for all the observation wells in the Calumet Tunnel System.

Monitoring Well Groundwater Quality Data

Tables 1 through 7 contain summary statistics of the groundwater quality parameters for 2011 for monitoring wells QC-2, QC-2.1, QC-2.2, QC-4 through QC-6, QC-9 through QC-31, QC-35, and QC-36 in the Calumet Tunnel System. The summary statistics include minimum, mean, maximum, standard deviation (Stdv.), median and coefficient of variation (COV) for eight groundwater quality parameters analyzed during 2011. The eight groundwater quality parameters are: chloride (Cl), conductivity (Cond.), hardness as calcium carbonate (Hard.), ammonia nitrogen (NH₃-N), pH, sulfate (SO₄), total dissolved solids (TDS), and total organic carbon (TOC). The summary statistics for a ninth groundwater quality parameter, fecal coliform (FC), are minimum, geometric mean (Geo. Mean), maximum, and median. The statistical analysis of the data was conducted using Microsoft® Excel functions.

Monitoring Well Number	Date of Sampling	Cl ¹ mg/L	FC ^{1,2} CFU/100 mL	SO ₄ ¹ mg/L	NH ₃ -N ¹ mg/L	TOC ¹ mg/L	TDS mg/L
QC-37	10/27/11			Monitoring well could not be sampled ³			
QC-37	12/2/11			Monitoring well could not be sampled ³			

¹The limit of quantification (LOQ) is 10.0 mg/L for Cl, 15 mg/L for SO₄, 0.10 mg/L for NH₃-N, 1.0 mg/L for TOC, and 60 mg/L for TDS. The detection limit for the FC analysis using the membrane filter method varies based on the actual sample analyzed.

²Unfiltered samples, all others were filtered through a 0.45-μm membrane.

³Monitoring well could not be sampled due to reasons provided in the text.

⁴BLOQ = Below LOQ.

TABLE AIV-2 (Continued): 2011 HARDNESS, CONDUCTIVITY, pH, TEMPERATURE, ELEVATION, AND RECHARGE DATA FOR MONITORING WELLS QC-1, QC-2, QC-2.1, QC-2.2, QC-4 THROUGH QC-7, AND QC-9 THROUGH QC-37 IN THE CALUMET TUNNEL SYSTEM

Monitoring Well Number	Date of Sampling	Hard. mg/L	Cond. ¹ $\mu\text{mhos}/\text{cm}$	pH ¹ Unit	Temp. °C	Groundwater Elevation ² Feet	Recharge ³ Hours
QC-37	10/27/11					Monitoring well could not be sampled ⁴	
QC-37	12/2/11					Monitoring well could not be sampled ⁴	

¹Unfiltered samples, all others were filtered through a 0.45- μm membrane.

²Groundwater elevations are relative to Chicago City Datum.

³Refers to elapsed time after initial drawdown before the well recovered sufficiently for sampling.

⁴Monitoring well could not be sampled due to reasons provided in the text.

*Groundwater elevation not taken. Reason not given in field log sheet.
