A Look Forward

Infiltration and Inflow Removal Work

July 18, 2012

MWRD LASMA Visitor Center

David St. Pierre
Executive Director

MWRDGC

I/I Control Program

- **Regulatory Requirement**

 - Special condition in draft NPDES permits

- **O&M Issues**

 - Increasing wet weather flows at MWRD facilities

- **Public Health and Safety Concerns**

 - SSOs, basement backups, localized flooding, damages

Response to the challenges

Formation of the ATP to exchange of views, better understand the requirements, and develop a meaningful, cost-effective solution that is supported by stakeholders

ATP Discussions

- Dialogue with the stakeholders in this forum has been friendly and encouraging
- Subject Matter Experts have also contributed enormously toward mutual interest and knowledge
- Proceedings at ATP meetings are well documented and posted on MWRD webpage for public benefit

MWRD Board of Commissioners

- The Board will be briefed on the proceedings of the ATP
- Policy questions must be addressed before a new I/I control program proceeds
- A study session may be held in September to appraise the Board of these issues
- ATP members and COGs will be informed of the study session, if one is scheduled, should they wish to attend

A Look Forward

- **Receive Board of Commissioners' input/feedback**
- **Present Board comments to the ATP meeting, tentatively scheduled on September 19, 2012**
- **If Board feedback has not been received in time, the September meeting will be cancelled and the matter will be discussed at the November ATP meeting**

It is in the best interest of all stakeholders to continue this forum and dialogue until a framework for a full and final solution is established.

Any Questions?
