Dear Ms. Siders:

Subject: Hanover Park Water Reclamation Plant - Illinois Environmental Protection Agency

Permit No. 2022-SC-66896, Special Condition 2 Monitoring Report for April, May, and

June 2022

The attached table contains the monitoring data for the Hanover Park Water Reclamation Plant (WRP) Fischer Farm site for April, May, and June 2022, as required by Illinois Environmental Protection Agency (IEPA) Operating Permit No. 2022-SC-66896, Special Condition 2. Analytical data for well water samples collected during the quarter are presented in <u>Table 1</u>.

Based on the investigation of historical high levels of ammonia nitrogen (NH_3-N) plus nitrite+nitrate nitrogen (NO_2 - $+NO_3$ --N) in Well 7 during past monitoring, it appears that the source of these high levels is seepage from adjacent lagoons and subsurface drainage associated with supernatant application, both of which have high NH_3-N levels. Since implementing management practices to reduce the loading in adjacent lagoons and stop all applications of supernatant and biosolids in the closest farm field (Field 7), NH_3-N plus NO_2 - $+NO_3$ --N in Well 7 has shown a decreasing trend, but with some fluctuation. We will continue to implement these practices and evaluate this trend.

The data reported are as follows:

<u>Table 1</u> Analysis of Water From Monitoring Wells W-5, W-6, W-7, and W-8 at the Hanover Park Fischer Farm Site Sampled in April 2022.

<u>Figure 1</u> Map of Fields and Wells at the Hanover Park Fischer Farm Site of the Metropolitan Water Reclamation District of Greater Chicago.

Very truly yours,

Albert Con

Albert E. Cox, Ph.D.
