Dear Mr. Brown:

Subject: Transmittal of the Report “Thornton Composite Reservoir Groundwater  
Monitoring Report Fourth Quarter 2023”

Please find attached the report entitled “Thornton Composite Reservoir Groundwater Monitoring Report Fourth Quarter 2023” transmitted electronically. The report is prepared for transmittal to the Illinois Environmental Protection Agency (IEPA) in accordance with the Thornton Composite Reservoir Groundwater Monitoring Plan. Also attached is the Excel spreadsheet of the Thornton Composite Reservoir raw data as required by the IEPA.

If you have any questions or would like to have additional information, please contact Mr. Benjamin Morgan at (708) 588-3743 or MorganB@mwr.org.

Very truly yours,

  
Albert Cox, Ph.D.  
Environmental Monitoring and Research Manager  
Monitoring and Research Department

## **ACKNOWLEDGMENTS**

This report for the Thornton Composite Reservoir Groundwater Monitoring was generated by the Monitoring and Research Department. All samples were collected by A3 Environmental Consultants (contractor) under Thornton Composite Reservoir Contract 21-100-11. Analyses were performed by the Analytical Laboratories Division and the Analytical Microbiology Laboratory of the Metropolitan Water Reclamation District of Greater Chicago (District). Special thanks are due to Ms. Laura Franklin for typing and formatting this report.

## **DISCLAIMER**

Mention of proprietary equipment and chemicals in this report does not constitute endorsement by the District.

## INTRODUCTION

A Groundwater Protection System (GPS) was constructed for the Thornton Composite Reservoir (TCR) to protect against the exfiltration of combined sewer flow (CSF) into the surrounding dolomite aquifers. The CSF and minimal amounts of stormwater are stored in the reservoir during and after large storm events. To monitor the performance of the GPS, a network of monitoring wells located outside the perimeter of the GPS is being monitored as discussed in the Revised Groundwater Monitoring Plan (GMP) (Black & Veatch, 2016). As explained in the Revised GMP, one sample of reservoir water, one from the Main Quarry Sump, and one from each of the seven wells are collected annually and analyzed for the Illinois Administrative Code (IAC) Title 35 Part 620 Class I groundwater constituents. In addition, following a reservoir fill event or during a routine quarterly event, groundwater is sampled from the seven wells and the Main Quarry Sump and tested for a targeted list of parameters that are more likely to be detected in CSF water.

The monitoring well system consists of one deep well, TB-124, which monitors the underlying Galena Aquifer, and six vertical Westbay multi-level monitoring wells, TB-118, TB-119, TB-120, TB-121, TB-122, and TB-123, which monitor the Silurian dolomite aquifers. As discussed in the Revised GMP, following a reservoir fill event, sampling is required every two weeks while the water in the reservoir remains above an elevation of -280 feet Chicago City Datum (CCD). Groundwater is sampled from each well at the first sample interval port immediately below the reservoir water elevation. Each of the multilevel monitoring wells is capable of monitoring four distinct 20-foot intervals in the Silurian dolomite aquifer.

The locations of the monitoring wells, the quarry sump, the TCR, and the GPS are presented in [Figure 1](#). The Main Quarry Sump is located beyond the south boundary of the GPS and is not a component of the TCR but is an integral part of the Hanson Material Services mining quarry to the south of the TCR. This sump facilitates mining operations by minimizing the water level at the bottom of the quarry. It is possible that the bottom of this sump could extend beyond the lowest depth of the TCR (-297.5 feet CCD). The sump contains mainly groundwater and small quantities of surface runoff, and it is sampled quarterly and during fill events, along with the wells, to evaluate the potential migration of contaminants from the TCR to the sump.

[Table 1](#) lists the characteristics of all wells at the TCR site (well location coordinates, elevations, and depths, and the sampling port interval elevations).

Prior to the TCR becoming operational in November 2015, eight (8) sampling events were conducted on a quarterly basis for two years (May 2012 through March 2014) to provide background data on the existing groundwater quality. In order to evaluate the effectiveness of the grout curtain and the GPS, the Revised GMP (2016) presents the analysis of data for all samples collected during the background monitoring period and provides a baseline for comparison with routine monitoring data. Changes over time in groundwater calcium and magnesium concentrations would also be useful in tracking the occurrence of infiltration/exfiltration. Groundwater analytical data routinely generated for the monitoring wells, reservoir, and sump will also be compared with the IAC Title 35 Part 620 Class I Groundwater Standards (Illinois Pollution Control Board, Illinois Environmental Protection Agency, 2013) to evaluate any exceedances in groundwater standards.

TB-124 <sup>3</sup>	1,792,200.77	695,591.56	29.6	29.2	728			-663 to -698	

<sup>1</sup>Illinois State Plane Coordinate System (NAD 1927).

<sup>2</sup>Chicago City Datum (CCD).

<sup>3</sup>TB-124 is a conventional well screened from -663 to -698 ft CCD. Samples are taken at approximately 650 ft below ground surface.

There was one fill event during the fourth quarter of 2023 (the fifth event of 2023). The fill event began on October 27 and lasted until October 29, requiring a single sampling. Per the Revised GMP, the annual monitoring event sampling required in the fourth quarter can be combined with a routine fill event sampling. Thus, this sampling serves as both fill event and annual sampling. The start of sampling was delayed beyond October 29 until the sampling equipment was returned from the manufacturer for repair. One complete set of annual monitoring event samples was collected during November 6 – 13, 2023, at the Reservoir, the Main Quarry Sump, and all monitoring wells.

This report presents field activities, observations, and analytical data for surface and groundwater monitoring samples taken at the Main Quarry Sump, the TCR, and at all monitoring wells from November 6 – 13, 2023.

## FIELD ACTIVITIES

For this report period, one complete set of samples for the annual monitoring event was collected at the TCR, the Main Quarry Sump, the deep well, and at sampling port 3 of all multilevel wells from November 6 – 13, 2023. Sample collection dates are shown in Table 2.

Using an Oakton PC450 pH/conductivity/temperature meter, the pH, electrical conductivity (EC), and temperature of each sample were measured and recorded immediately after collection.

Prior to sampling monitoring wells, hydrostatic pressure was measured, at Port 3 in multilevel wells, or at 650 feet below surface level in well TB-124, to calculate the groundwater elevation. Table 3 lists the elevations at Port 3 of each well and the corresponding groundwater elevations during the annual monitoring event sampling in November 2023.

All samples were packed in ice and transported to the Metropolitan Water Reclamation District of Greater Chicago's (District's) Analytical Laboratories Division for the analysis of selected inorganic constituents (IAC Title 35 Part 620 Class I Groundwater Standards) in accordance with the Revised GMP. Additional aliquots were also prepared in the field and transported in ice to the District's Analytical Microbiology Laboratory for fecal coliform (FC) analysis. An additional set of aliquots was prepared in the field and transported in ice to a contract laboratory for analysis of selected organic constituents (IAC Title 35 Part 620 Class I Groundwater Standards) in accordance with the Revised GMP.

TABLE 2: DEVICES AND CORRESPONDING DATES OF SAMPLING DURING THE ANNUAL MONITORING EVENT IN NOVEMBER 2023

Date of Sampling	Device/Structure Sampled
11/06/23	TB-124 <sup>1</sup> , Main Quarry Sump <sup>1</sup> , Sump Duplicate <sup>1</sup>
11/07/23	TB-119 <sup>2</sup> , TB-124 <sup>2</sup> , Main Quarry Sump <sup>2</sup> , Sump Duplicate <sup>2</sup>
11/08/23	TB-118 <sup>2</sup> , TB-122 <sup>2</sup> , TB-123 <sup>2</sup>
11/09/23	TB-120 <sup>2</sup> , TB-121 <sup>3</sup>
11/10/23	TB-118 <sup>1</sup> , TB-122 <sup>1</sup> , TB-123 <sup>1</sup>
11/13/23	TB-119 <sup>1</sup> , TB-120 <sup>1</sup> , Reservoir <sup>3</sup>

<sup>1</sup>Aliquots collected only for analyses of organic parameters.

<sup>2</sup>Aliquots collected only for analyses of fecal coliform and inorganic parameters.

<sup>3</sup>Aliquots collected for all analyses: fecal coliform, inorganic, and organic parameters.

TABLE 3: SUMMARY OF ELEVATIONS AT SAMPLING PORT 3 OF EACH WELL AND CORRESPONDING GROUNDWATER ELEVATIONS DURING ANNUAL MONITORING EVENT SAMPLING IN NOVEMBER 2023

Sample Date	Well ID	Sampling Port	Groundwater Elevation
11/08/23	TB-118	-289	-84
11/07/23	TB-119	-289	-163
11/09/23	TB-120	-290	-216
11/09/23	TB-121	-288	-168
11/08/23	TB-122	-288	-158
11/08/23	TB-123	-288	-47
11/07/23	TB-124 <sup>2</sup>	NA <sup>3</sup>	NC <sup>4</sup>

<sup>1</sup>Chicago City Datum.

<sup>2</sup>TB-124 is a conventional well screened from -663 to -698 ft CCD. Samples were taken at approximately 650 ft below ground surface during the annual monitoring event sampling in November 2022.

<sup>3</sup>Not applicable.

<sup>4</sup>Not calculated because pressure inside the well casing of TB-124 was inadvertently not recorded.

## ANALYTICAL RESULTS

Table 4 lists the analytical methods used by the laboratory for measured parameters. Analytical results were reviewed to identify any analytes that exceeded the Illinois Class I Groundwater Standards (35 IAC Part 620).

The analytical data for all well samples, the Main Quarry Sump, and the TCR collected during the annual monitoring event from November 6 – 13, 2023, are presented in Table 5. There were a few exceedances of the Class I Groundwater Standards, including pH, total dissolved solids (TDS), chloride, sulfate, and boron, as indicated in bold font in Table 5. Among these parameters, only pH showed a value higher than the background maximum. Groundwater FC bacteria were not detected in any well or the Main Quarry Sump during the annual monitoring event (Table 5).

Almost all organic parameters were undetectable in the annual monitoring event samples (Table 5). There were no exceedances of Class I Groundwater Standards for any organic parameter in the annual monitoring samples. Benzo[b]fluoranthene in sample TB-122, benzo[k]fluoranthene in samples TB-119 and TB-122, 2,4-dinitrotoluene in samples TB-120 and TB-123, benzo[a]anthracene in samples TB-119, TB-120, TB-121, and TB-122, and mecoprop, simazine, 1,4-dioxane, and bis(2-ethylhexyl)phthalate in all samples were below the laboratory reporting limits, but the reporting limits were higher than the Class I Groundwater Standards. Laboratory reporting limits for bis(2-ethylhexyl)phthalate in all samples were also higher than the background maximum concentration of 0.0052 mg/L. There were no exceedances of Class I Groundwater Standards for radioactivity parameters in the annual monitoring event samples.

TABLE 4: ANALYTICAL METHODS USED FOR REQUIRED PARAMETERS

Parameters	Analytical Method
<b>Inorganic</b>	
Chloride, fluoride, sulfate	USEPA 300.0
Total dissolved solids	SM 2540C
Boron and Target Analyte List metals except calcium, magnesium, and mercury	USEPA 200.8
Hardness (as calcium and magnesium)	USEPA 200.7
Mercury	SM 3112B

<sup>1</sup> RL: Laboratory reporting limit. Where analyses for the same parameter had different RLs, the maximum RL is shown.

<sup>2</sup> Duplicate sample.

<sup>3</sup> NL: No existing limit.

<sup>4</sup> NRR: No reportable result due to likely sample misidentification.

<sup>5</sup> BRL: Below reporting limit in background monitoring samples.

<sup>6</sup> NRR: No reportable result due to analytical interference that was not resolved by re-analysis.

<sup>7</sup> ND: Not determined during background monitoring.

<sup>8</sup> Extracted and analyzed beyond holding time.
